3 MONTHS	01/12/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/786,555

Applicant(s)

TAKATA ET AL.

Examiner

Jeffrie R. Lund

Art Unit

1763

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 October 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10/31/06 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☒ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiozawa, JP 04-134815 A in view of Beatty et al, US Patent 6,692,249 B1.

Shiozawa teaches a thermal treatment system that includes an outer tube 1 made of silicon oxide that has a closed upper portion; an open lower portion; and a flange formed on an outer peripheral side of the lower portion. The lower portion has a tapered portion 12 so as to expand a diameter thereof toward the lower end. (See figures 1-3)

Shiozawa differs from the present invention in that Shiozawa does not teach the body is made out of silicon carbide or the specific dimensions of the outer tube (i.e. size, radii of curvature, surface roughness, etc).

Beatty et al teaches a thermal treatment apparatus that includes an outer tube 12 made of silicon carbide.

Providing dimensions for an apparatus is a fundamental engineering skill and is part of applying the disclosures of patents, which rarely give specific dimensions.

Furthermore, it was held in *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984), by the Federal

Art Unit: 1763

Circuit that, where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device. (Also see MPEP 2144.04.IV.A) If the apparatus of Shiozawa were made to the dimensions taught in the specification, it would have all of the claimed ratios.

The motivation for making the outer tube of Shiozawa out of silicon carbide is to provide an alternate material of construction as taught by Beatty et al.

The motivation for making the apparatus of Shiozawa to the specific dimensions of the specification is to provide specific dimensions from which to manufacture the apparatus of Shiozawa as required by Shiozawa.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to make the outer tube of Shiozawa out of silicon carbide as taught by Beatty et al, and to provide specific dimension from which to manufacture the apparatus of Shiozawa.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beatty et al, US Patent 6,692,249 B1.

Beatty et al teaches a thermal treatment system that includes an outer tube 12 made of silicon carbide that has a closed upper portion; an open lower portion; and a flange formed on an outer peripheral side of the lower portion. The lower portion has a tapered portion so as to expand a diameter thereof toward the lower end. (See figures 1-3) For clarity the Examiner has attached a blown up portion of figure 2, which is

Art Unit: 1763

similar to figures 1 and 3.

Beatty et al differs from the present invention in that Beatty et al does not teach specific dimensions of the outer tube (i.e. size, radii of curvature, surface roughness, etc).

The providing dimensions for an apparatus is a fundamental engineering skill and is part of applying the disclosures of patents, which rarely give specific dimensions. Furthermore, it was held in *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984), by the Federal Circuit that, where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device. (Also see MPEP 2144.04.IV.A) If the apparatus of Beatty et al were made to the dimensions taught in the specification, it would have all of the claimed ratios.

The motivation for making the apparatus of Beatty et al to the specific dimensions of the specification is to provide specific dimensions from which to manufacture the apparatus of Beatty et al as required by Beatty et al.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide specific dimension from which to manufacture the apparatus of Beatty et al.

Response to Arguments

4. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.
5. Applicant's arguments filed January 12, 2006 have been fully considered but they are not persuasive.

In regard to the argument that:

That is, the lower portion which includes the tapered portion has a thickness t_a , the tapered portion is expanding the inner diameter, and the flange is formed on an outer peripheral side of the lower portion. Thus, the tapered portion of the lower portion forms an angle of less than 90° in the inside with respect to the surface of the base and an angle of more than 90° on the outside (see Appendix A). On the other hand, the tube shown in Beatty et al. has a "tapered" portion which has a different thickness from the rest of the tube, i.e., the "tapered" portion of Beatty et al. is made thicker than the rest of the tube. As such, it is believed that excessive stress is exerted on the thicker portion of the Beatty et al. tube, making it less durable. Furthermore, the tube shown in Beatty et al. has the flange and "tapered" portion supporting the tube at the right angle, and thus more stress is believed to be concentrated toward the flange as shown in Figure 4, making it more likely to be broken. Therefore, it is respectfully submitted that the structure recited

in amended Claim 1 is believed to be distinguishable from Beatty et al.

The Examiner disagrees for the following reasons:

- 1) Where t_a is measured from is not specified.
- 2) The ranges in which t_a is used are so large that doubling the thickness of t_a would not necessarily move the ratio out of the claimed range.
- 3) The angle of the flange to the base is not claimed.
- 4) The durability of the base is not claimed.
- 5) The Applicant has not provided any evidence to support the arguments "it is believed that excessive stress is exerted on the thicker portion of the Beatty et al. tube, making it less durable" and "thus more stress is believed to be concentrated toward the flange".
- 6) The outer tube of figure 4 is not the same as the outer tube of Beatty et al.

Conclusion

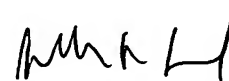

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art teaches the technological background of the invention. The cited art contains patents that could be used to reject the claims under 35 USC § 103. These rejections have not been made because they do not provide any additional or different teachings, and if they were applied, would have resulted in an undue multiplication or references. (See MPEP 707.07(g)) Yamaga et al, US Patent 5,578,132 (figure 11) and Ahlgren, US Patent 4,985,281 could be used to make rejections similar to the rejection under Beatty et al.
7. Any inquiry concerning this communication or earlier communications from the

Art Unit: 1763

examiner should be directed to Jeffrie R. Lund whose telephone number is (571) 272-1437. The examiner can normally be reached on Monday-Thursday (6:30 am-6:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on (571) 272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
